EDUCATION

Mar 2025 - Present	KAIST Graduate School of Data Science <i>M.S. Candidate in Data Science (Expected Graduation Date: Feb 2027)</i> ● Cumulative GPA: 3.96/4.3 ● Relevant courses: Artificial Intelligence for Finance, Data Analysis and Corporate Finance Research, Investments, Advanced Econometrics, NLP in Social Science	Daejeon, Korea
Feb 2018 – Feb 2025	KAIST <i>B.S. of Industrial and Systems Engineering</i> ● Cumulative GPA: 3.46/4.3 ● Relevant courses: Engineering Statistics, Operation Research, Statistical Machine Learning, Accounting Principle, Introduction to Data Science, Machine Learning, Financial Management	

RESEARCH EXPERIENCE

Mar 2025 - Present	Research Paper - The Role of Corporate Disclosure Specificity in Cybersecurity Risk and Predictive Modeling <i>1st Author and Presenter</i> ● Built an interpretable ML framework to predict future corporate cybersecurity incidents from SEC 10-K risk disclosures ● Constructed NER-based disclosure-specificity measures and evaluated their predictive power using logistic regression and tree-based models ● Improved rare-event prediction with SMOTE and LightGBM, achieving an F1 score above 0.20 versus a prior benchmark of approximately 0.06	Daejeon, Korea
Dec 2025 - Present	Working Paper - Managerial Evasion in Earnings Call Q&A and Capital Market Information Processing ● Study whether evasive managerial responses in earnings-call Q&A reduce information transfer and predict weaker post-call market outcomes ● Construct a conference-call-level evasion measure from 3.4 million question-answer pairs using the Eva-4B-V2 / EvasionBench framework and merge the sample with Compustat, CRSP, IBES, and competition measures ● Preliminary results show that higher evasion is associated with greater analyst forecast errors and dispersion, and is positively related to future crash-risk measures, consistent with a bad-news-hoarding mechanism	Daejeon, Korea
Apr 2026 - Present	Individual Quantitative Research Project - Bitcoin Market Analysis <i>Independent Project</i> ● Designed a multi-asset filtering approach by combining BTC regime signals with daily gold and oil price indicators ● Backtested the strategy from Dec 2025 to Mar 2026, achieving +2.15% total return, 1.68 Sharpe ratio, 61.5% win rate, and -1.28% maximum drawdown	Daejeon, Korea

CONFERENCE PRESENTATIONS

May 2026	2026 Innovation and Technology Management Conference, <i>1st author and poster presenter</i>	Beijing, China
Nov 2025	2025 Fall Korean Institute of Industrial Engineers, <i>1st author and oral presenter</i>	Daejeon, Korea
Aug 2025	3 rd K-Datascience Conference, <i>1st author and oral presenter</i>	Daegu, Korea

PROFESSIONAL & LEADERSHIP EXPERIENCE

Aug 2023 – Feb 2024	Hana Institute of Technology <i>Intern, AI unit</i> ● Built and evaluated ranking models for Korean equity funds using Sharpe-based targets and benchmark comparisons ● Developed a linear index prediction model for equity and bond indices to support asset-allocation analysis	Seoul, Korea
Jan 2023 – Jun 2023	FnGuide <i>Intern, AI team</i> ● Preprocessed datasets for a T5-based data-to-text NLP task generating preliminary earnings-estimate news ● Evaluated technical-signal-based market timing detectors and backtested resulting trading strategies	Seoul, Korea
Mar 2019 – Dec 2022	KAIST Financial Analysis Club <i>Vice President</i> ● Led equity research projects across multiple industries using DCF, comparables, and industry analysis	Daejeon, Korea

SKILLS & INTERESTS

Coding	Python, Stata
Technical Languages	Machine Learning, NLP, Backtesting, EDA, Econometrics, Financial Modeling
Certificate	Korean (native); English (OPIc IH, Apr 2026; TOEFL in progress)
Awards	Certified Financial Risk Manager (Sep 2021, Korea); Certified Investment Manager (Jun 2022, Korea)
	Future Researcher, K-DataScience Conference (Aug 2025, Korea)
